

Trino Gateway

Trino Summit 2023

Agenda

- Mission statement
- Benefits
- History
- Use Cases
 - Naver (presenter: Jaeho)
 - Bloomberg (presenter: Andy)
- Demo (presenter: Will)
- Trino Gateway Project Future
- Contribute!
- Q&A (presenter: Will, Vishal, Andy, Jaeho)

Mission Statement

- Lightweight reverse proxy that **forwards requests** to distributed **Trino clusters**

Benefits to different stakeholders

- Benefits to cluster admins: configure an efficient and reliable infrastructure
 - Query Load Distribution
 - Consistent Querying Results
 - High Availability (HA) Support
 - Maintain Service Level Agreements (SLAs) for ETL Schedule Operations
 - Graceful Shutdown Support
- Benefits to end users: provide a reliable and fast query experience
 - Maximize performance and Service quality
 - Resource Failure Mitigation
 - Reliable Service During Deployment and Failures
 - Minimized Query Latency

History

- Show some love to Lyft
 - Originally lyft/presto-gateway
 - First public release in Feb 16, 2019
 - Presto Infrastructure at Lyft blog post
- Starburst as new Maintainers
 - Special thanks to Manfred!
- Current contributors
 - Bloomberg
 - Naver
 - LinkedIn
 - Dune
 - Starburst

Naver Use Cases – Company

- <u>Naver Corporation</u> is a global ICT company, providing South Korea's number 1 search portal "NAVER".
- Offers various products, including a web search portal, a social media platform called <u>LINE</u>, webtoon platform called <u>Line Webtoon</u> and diverse internet services.

Naver Use Cases – Search Platform

Search Platform Team

- Provide optimal search results for
 - News, maps, cafe, blogs, images, videos
- Multi-ranking and collection-ranking technology

Statistics for Trino used by Analysts

- 4K queries, 300 TB data, 10 Trillion rows per day.
- 10 PB business data stored in our data centers

Naver Use Cases

- Managing Trino Clusters with Various Purposes
 - Problem
 - We provide trino clusters for various purposes: fast querying vs large datasets
 - Each cluster has their own url for different purposes
 - Any server updates forces users to switch to other clusters or wait until server was back up
 - Solution
 - Long and complex Trino Cluster URLs are combined into a single one.
 - Users now can query through a unified URL, avoiding disruptions during system updates.
 - Able to shutdown gracefully and update clusters

Naver Use Cases

- Need for Dynamic Routing depending on Trino Cluster's Status
 - Problem
 - Too many queries are requested at once, leading poor performance due to resource starvations.
 - A query might need more memory than the query limit set for each worker node
 - A query might need more memory than the workers' physical memory.
 - Failing after running for certain period of time is a waste of resources
 - Solution
 - Before routing
 - Phase 1 consider current cluster's queued status and use <u>Resource Groups</u> to force CPU/Memory/Concurrency limits
 - Phase 2 (TBD) Calculate expected memory & cpu usage for each query and dynamically route to appropriate cluster

Naver Use Cases - Architecture

TechAtBloomberg.com

Why and How we use Trino and Trino Gateway at Bloomberg

- Query federation with custom access controls
 - Access different data sources such as Postgres or SQL
 - Access control via Trino OPA plugin
- Trino during ETL process
 - Create intermediate datasets or final products
- Store high volume data products
 - SQL on S3 via Apache Iceberg/Hive for data products

Bloomberg

- Served **tens of millions** of Trino queries to date
- High availability is our priority

TechAtBloomberg.com

Bloomberg Use Cases

- App Security
 - Supports OAuth authentication

Bloomberg

Engineering

- Supports Form authentication
 - Basic
 - LDAP

Bloomberg Use Cases

- Health checks
 - Problem
 - Clusters were inactivated programmatically without turning back on after they became healthy
 - Solution
 - Introduced Healthy, Pending, and Unhealthy states to prevent a cluster from automatically being turned off
 - Achieved high availability

Bloomberg Use Cases

- Dependency modernization
 - Problems
 - Core dependencies were too old and no longer supported
 - Difficult to run integration tests because we could not use the DropwizardExtensionSupport extension support from the library
 - Solution
 - Upgraded dependency versions and dropped duplicate dependencies

Bloomberg

naineering

- Dropwizard v1.3.29 -> v4.0.2
- Java 11 -> Java 17
- Jetty v9.4.48 -> v11.0.15
- Javax -> jakarta
- TestNG/junit5 -> junit5

Demo

Trino Gateway Project Future

- Short-term goals
 - Modernizing dependencies continued
 - Improving test suite
 - Aligning code styles and patterns with Trino
 - Supporting modern deployment tools
 - Tracing
 - Containerization
- Medium-term and long-term goals for capabilities and improvements
 - Automatic query retry to other clusters if backend goes offline or due to lack of resources (memory)
 - Integration with group providers for routing
 - Supporting for parallel testing (e.g. duplicate a query to a second cluster and consume result)
